Digital implications along the Student Journey

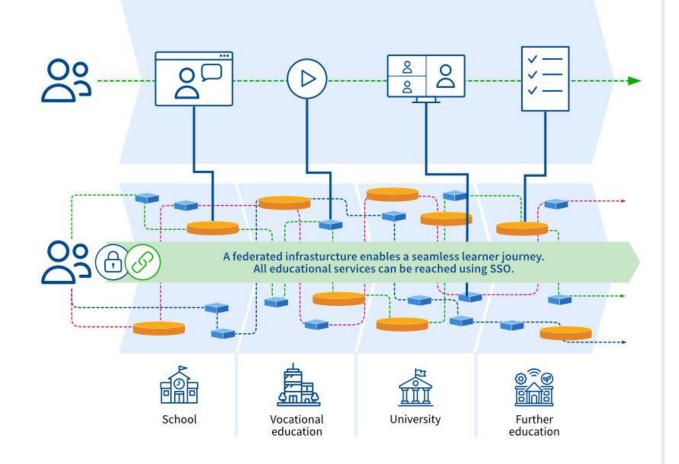

User Experience within a Federated Infrastructure

Seamless user experience

Federated infrastructure

Bündnis für Bildung 2023, David Goossens

Prototyping a National Education Infrastructure

Key Data

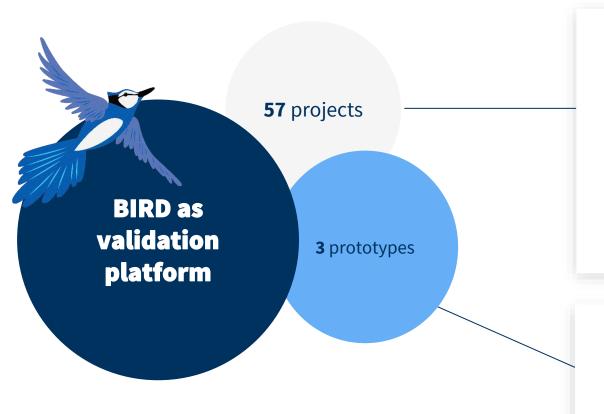

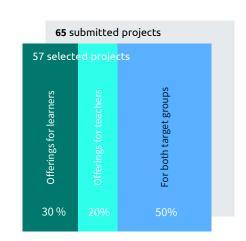

Federal Ministry of Education and Research (BMBF): Funding programme

Objective 1: Services for **learners**

Duration of 5 months

Objective 2: Services for **teachers**

Duration of 5 months

Objective 3: Complex prototypes with a short runtime of 4 months to identify weaknesses and coordinate those with BIRD.

BIRD: Prototyping a National Education Infrastructure

- Validate the feasibility of a future National Digital Education
 Infrastructure, which connects existing educational services and platforms
- Provide digital services across all sectors of education in the German federal education system: schools, HEIs, VET, and continuing education
- Support **self-determined** and **digital participation** in educational services across the entire learner journey

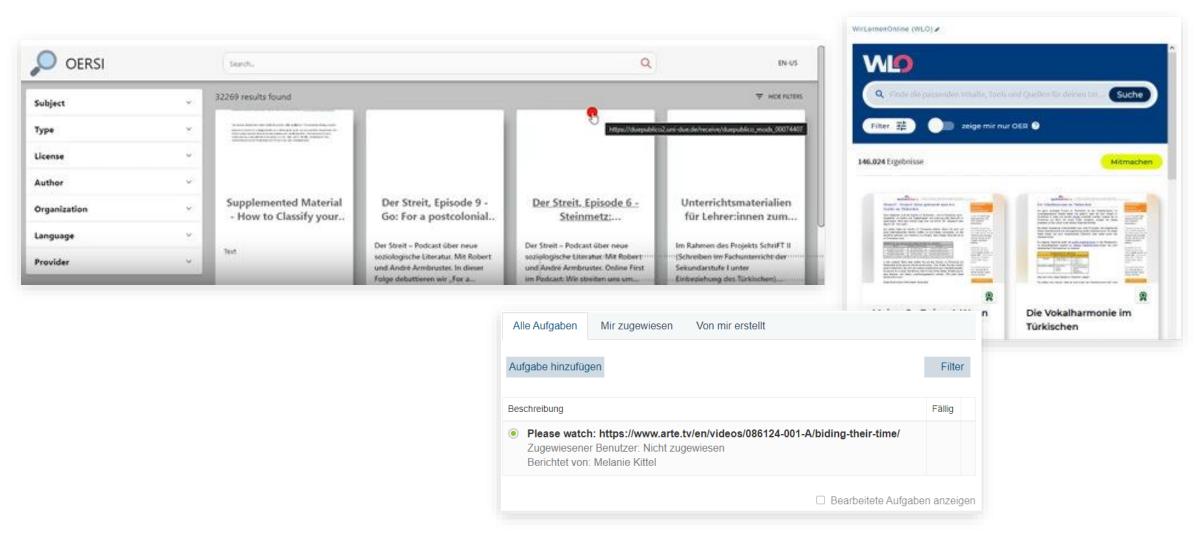

Crosslinking Content - Open Educational Resources

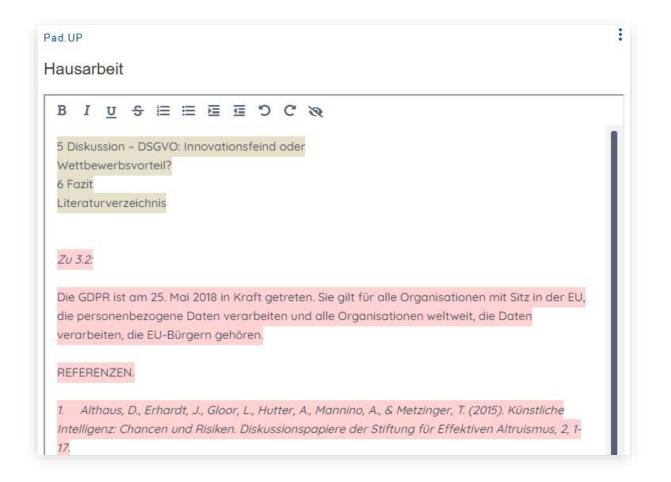

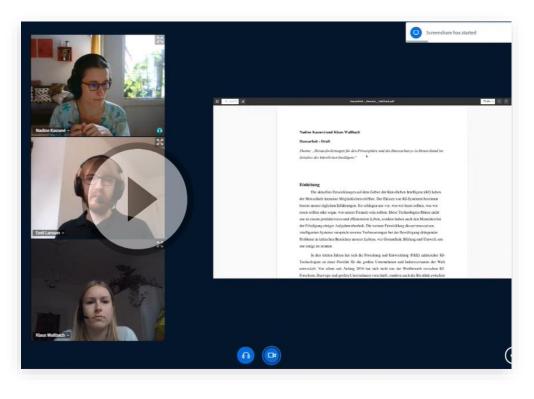

Crosslinking Tools - an eLearning Toolbox

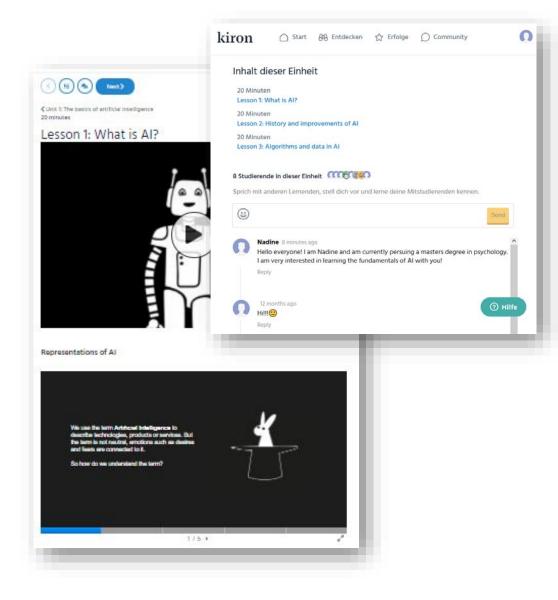

Linking people

- Seamless use of further offers
 - Independent compilation
 - Accessible joining
 - Easy interaction
- Context-related getting to know other interested parties and establishing contacts
- Learning more successfully through exchange with others
- Open collaboration spaces for teachers and their inservice training for digital learning and teaching

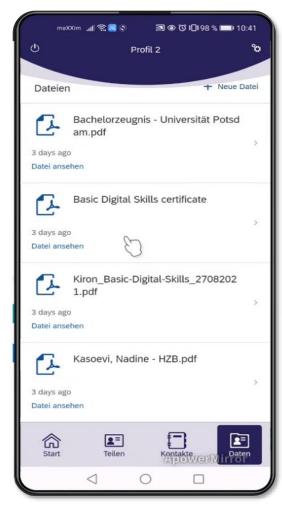

User-centred data management & communication: Digital education certificates

- Overview and administration of certificates
- Use of evidence of competence in the context of job applications

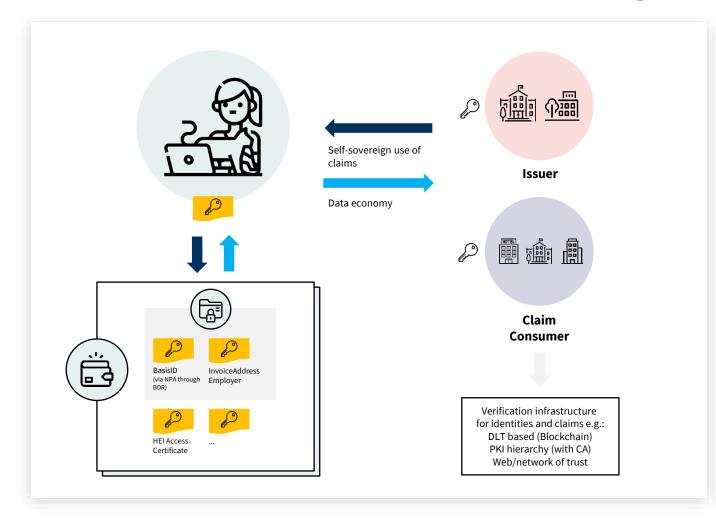

National Education Platform: Self-Sovereign Identities & Wallets

The purpose of a wallet is to store **SSI features** that allow only required information to be presented to third parties in a secure and private manner.

BIRD pilot project

Use Case:

Transfer of materials and personal details

Claims:

Identity and profile, Competency assignments Diplomas, certificates, learning outcomes

Issuer for Claim:

Educational institutions, users, education providers

Verification infrastructure:

"Network of Trust"/ PKI (issuer, holder and verifier)

Schemes, e.g:

Decentralised Identity (DID), Verifiable Credentials, European Self-Sovereign Identity Framework (ESSIF), W3C

Online standards, e.g:

OZG, EMREX, Xhochschule EDCI, ELMO and eIDAS

Icons: Monkik, Freepik (5), Zlatko Najdenovski

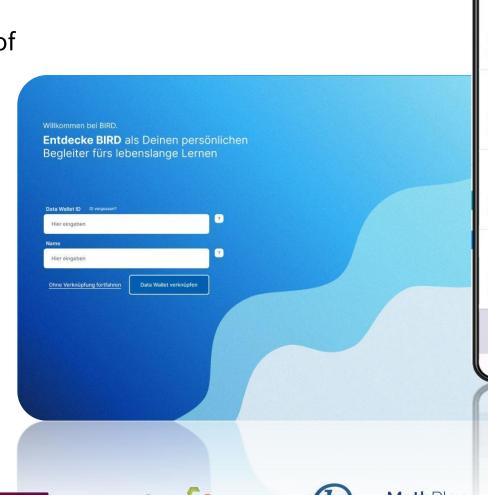

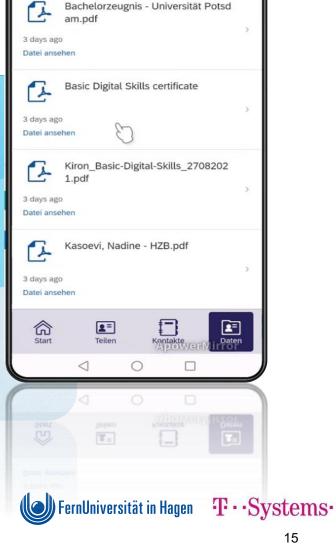

Integration mechanisms

DataWallet for the storage of personal data

- Single sign-on as the only login for all connected services
- Smart **metadata** management to individualise your own learning pathway
